

Dab (*Limanda limanda*) in Subarea 4 and Division 3.a (North Sea, Skagerrak and Kattegat)

ICES advice on fishing opportunities

ICES has not been requested to provide advice on fishing opportunities for this stock.

Stock development over time

The assessment is indicative of trends only. The biomass (SSB) has been increasing since the start of the time-series, but has declined since its peak in 2016. Total mortality (Z) is fluctuating without trend. Recruitment (R) showed an increasing trend until 2014, but has declined since then.

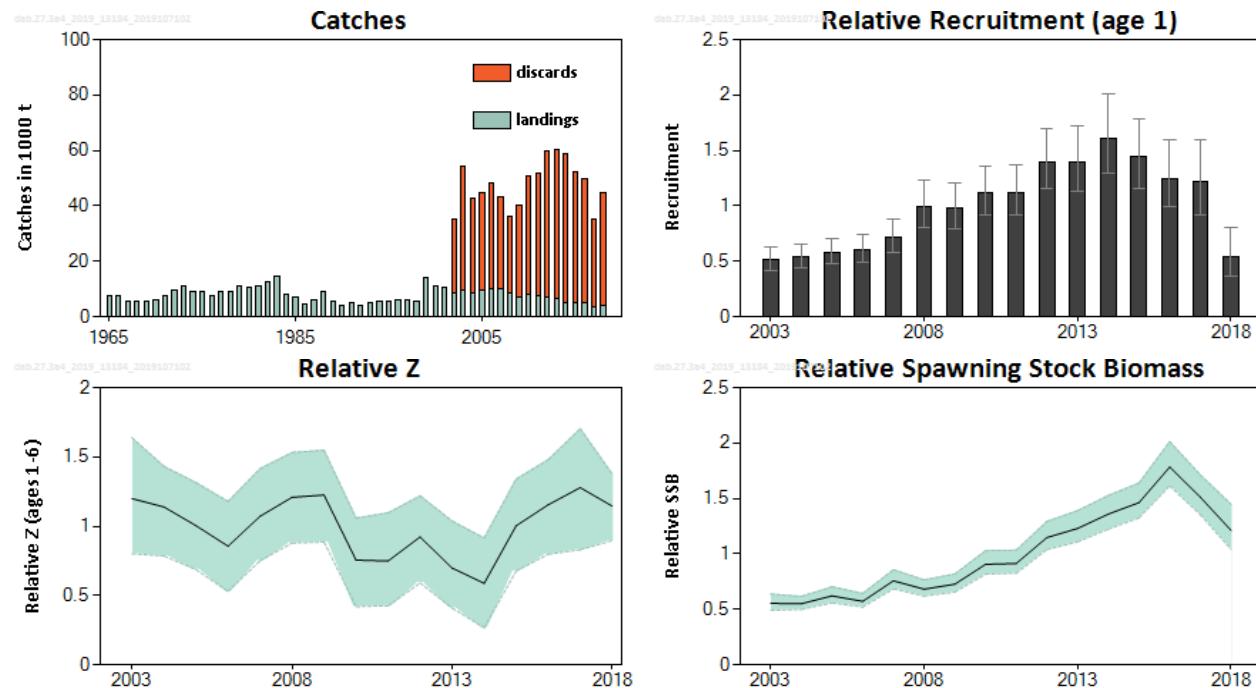

Figure 1 Dab in Subarea 4 and Division 3.a. Summary of the stock assessment. Top left: official landings (1965–2001) and ICES estimates of landings and discards (2002–2018). Top right: relative recruitment (age 1). Lower left: relative fishing pressure. Lower right: relative spawning-stock biomass. Shaded areas in Z and SSB and error bars in R show 90% confidence intervals.

Stock and exploitation status

ICES assesses that fishing pressure on the stock is below F_{MSY proxy}, and the spawning stock size is above MSY B_{trigger proxy}.

Table 1 Dab in Subarea 4 and Division 3.a. State of the stock and fishery relative to reference points. The fishing pressure and stock size status indicators are based on the SPiCT analyses shown in Figure 2.

	F_{MSY} -proxy	Fishing pressure			Stock size		
		2016	2017	2018	2016	2017	2018
Maximum sustainable yield	F_{MSY} -proxy	✓	✓	✓ Below	MSY B _{trigger proxy}	✓	✓ Above
Precautionary approach	F_{pa}, F_{lim}	✓	✓	✓ Below possible reference points	B _{pa} , B _{lim}	✓	✓ Above possible reference points
Management plan	F_{MGT}	—	—	— Not applicable	B _{MGT}	—	— Not applicable

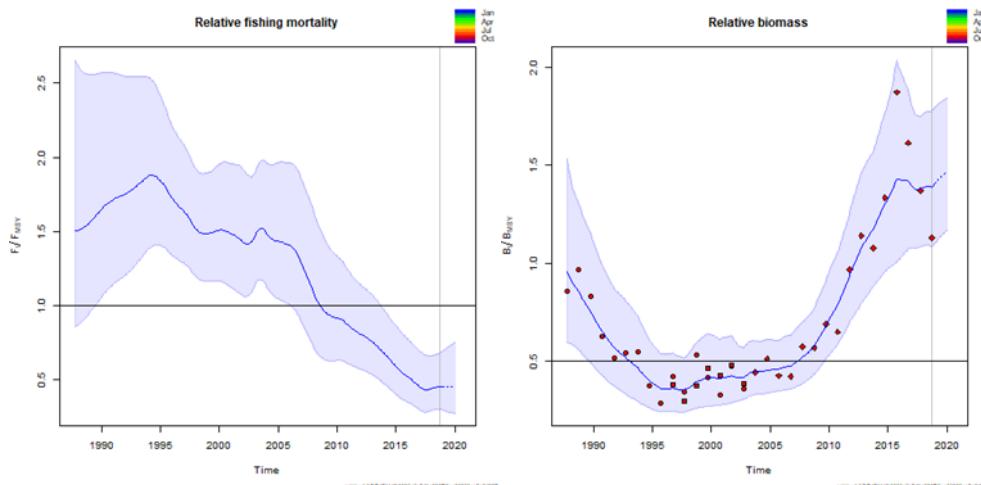

Figure 2 Dab in Subarea 4 and Division 3.a. SPiCT analysis showing fishing mortality relative to F_{MSY} and exploitable biomass relative to B_{MSY} . The symbols in the relative biomass plot indicate observed biomass indices (red dots = BTS Q3 Isis, red squares = BTS Q3 Tridens, red diamonds = combined BTS Q3 index) while the shaded areas in both plots indicate 95% confidence intervals. The horizontal lines indicate levels relative to the F_{MSY} and MSY $B_{trigger}$ proxies. The end of the data range is shown using a vertical grey line, and predictions beyond the data range are shown using dotted blue lines.

Catch scenarios

ICES has not been requested to provide advice on fishing opportunities for this stock.

Basis of the advice

ICES has not been requested to provide advice on fishing opportunities for this stock.

Table 2 Dab in Subarea 4 and Division 3.a. The basis of the advice.

Advice basis	ICES has not been requested to provide advice on fishing opportunities for this stock.
Management plan	The EU multiannual plan (MAP) for stocks in the North Sea (EU, 2018) and adjacent waters applies to catches of this stock.

Quality of the assessment

Dab is mainly a bycatch species in the demersal fisheries for North Sea plaice and sole, with a high discard rate. Landings data prior to 1998 are not complete.

Discard information is available for the years 2002–2018 for the most important fisheries. However, given the extremely high proportion of discards in the catch (91%), the discard raising procedure may introduce uncertainty in the estimation of total catch. Furthermore, survival rates of discards are unknown. No reliable data on discards are available for beam trawlers targeting brown shrimp. The discarding in these fisheries may have a considerable impact on the stock.

Issues relevant for the advice

In 2017, ICES advised that the risk of having no catch limits for the dab and flounder stocks was considered to be low and not inconsistent with the objectives of the Common Fisheries Policy (CFP) (ICES, 2017a). Dab and flounder are no longer managed under a TAC. ICES stated that this advice was valid as long as dab and flounder remained largely bycatch species, with the main fleets catching dab and flounder continuing to fish the target species (plaice and sole) sustainably within the F_{MSY} ranges provided by ICES. If this situation changes, or dab is no longer within safe biological limits, this advice would need to be reconsidered.

Reference points

Table 3 Dab in Subarea 4 and Division 3.a. Reference points, values, and their technical basis.

Framework	Reference point	Value	Technical basis	Source
MSY approach	MSY $B_{\text{trigger proxy}}$	$\frac{B}{B_{\text{MSY}}} = 0.5^*$	Relative value from the SPiCT model. B_{MSY} is estimated directly from the SPiCT assessment model and changes when the assessment is updated.	ICES (2017b)
	$F_{\text{MSY proxy}}$	$\frac{F}{F_{\text{MSY}}} = 1^*$	Relative value from the SPiCT model. F_{MSY} is estimated directly from the SPiCT assessment model and changes when the assessment is updated.	ICES (2017b)
Precautionary approach	B_{lim}	Not defined		
	B_{pa}	Not defined		
	F_{lim}	Not defined		
	F_{pa}	Not defined		
Management plan	SSB_{mgt}	Not defined		
	F_{mgt}	Not defined		

* No reference points are defined for this stock in terms of absolute values. The SPiCT-estimated values of the ratios F/F_{MSY} and B/B_{MSY} are used to estimate stock status relative to the proxy MSY reference points.

Basis of the assessment

Table 4 Dab in Subarea 4 and Division 3.a. Basis of the assessment and advice.

ICES stock data category	3 (ICES, 2018).
Assessment type	Survey trends-based assessment (based on SURBA assessment) (ICES, 2019).
Input data	Catch statistics, age-based survey index (combined BTS Q3), annual weight-at-age from surveys.
Discards and bycatch	Discards were quantified for the period 2002–2018. Discards ranged between 76% and 91% of the total catch. In 2018 discard information was provided for 76% of the total landings.
Additional indicators	SPiCT assessment, including additional surveys.
Other information	This stock was last benchmarked in 2016 (WKNSEA; ICES, 2016).
Working group	Working Group on the Assessment of Demersal Stocks in the North Sea and Skagerrak (WGNSSK)

Information from stakeholders

There is no additional available information.

Division 3.a: ICES estimates of landings and discards

Year	Total landings	Total discards
2002	1010	2587
2003	1062	4980
2004	828	3928
2005	902	3912
2006	789	3501
2007	751	3890
2008	529	2095
2009	501	2785
2010	579	3284
2011	571	2801
2012	853	7141
2013	1100	4083
2014	672	4100
2015	1036	9630
2016	956	4937
2017	786	2665
2018	848	2549

Summary of the assessment

Table 8 Dab in Subarea 4 and Division 3.a. Assessment summary. Weights are in tonnes. Landings: official estimates 1965–2001, ICES estimates 2002–2018.

Year	Recruitment age 1 Relative	High	Low	SSB Relative	High	Low	Landings tonnes	Discards tonnes	Relative Z	High	Low
1965							7571				
1966							7617				
1967							5439				
1968							5543				
1969							5552				
1970							6262				
1971							7788				
1972							9570				
1973							11106				
1974							9149				
1975							9082				
1976							7500				
1977							9020				
1978							9037				
1979							10959				
1980							10690				
1981							11133				

Year	Recruitment age 1 Relative	High	Low	SSB Relative	High	Low	Landings tonnes	Discards tonnes	Relative Z	High	Low
1982							12467				
1983							14771				
1984							8251				
1985							7047				
1986							4813				
1987							6189				
1988							9321				
1989							5641
