

Megrim (*Lepidorhombus whiffiagonis*) in divisions 7.b–k, 8.a–b, and 8.d (west and southwest of Ireland, Bay of Biscay)

ICES advice on fishing opportunities

ICES advises that when the EU multiannual plan (MAP) for Western Waters and adjacent waters is applied, catches in 2021 that correspond to the F ranges in the MAP are between 12 706 tonnes and 27 748 tonnes. According to the MAP, catches higher than those corresponding to F_{MSY} (19 184 tonnes) can only be taken under conditions specified in the MAP, whilst the entire range is considered precautionary when applying the ICES advice rule.

Management of catches of the two megrim species, *L. whiffiagonis* and *L. boscii*, under a combined species TAC prevents effective control of the single-species exploitation rates, and could lead to overexploitation of either species.

Note: This advice sheet is abbreviated due to the COVID-19 disruption. The previous advice issued for 2020 is attached as Annex 1.

Stock development over time

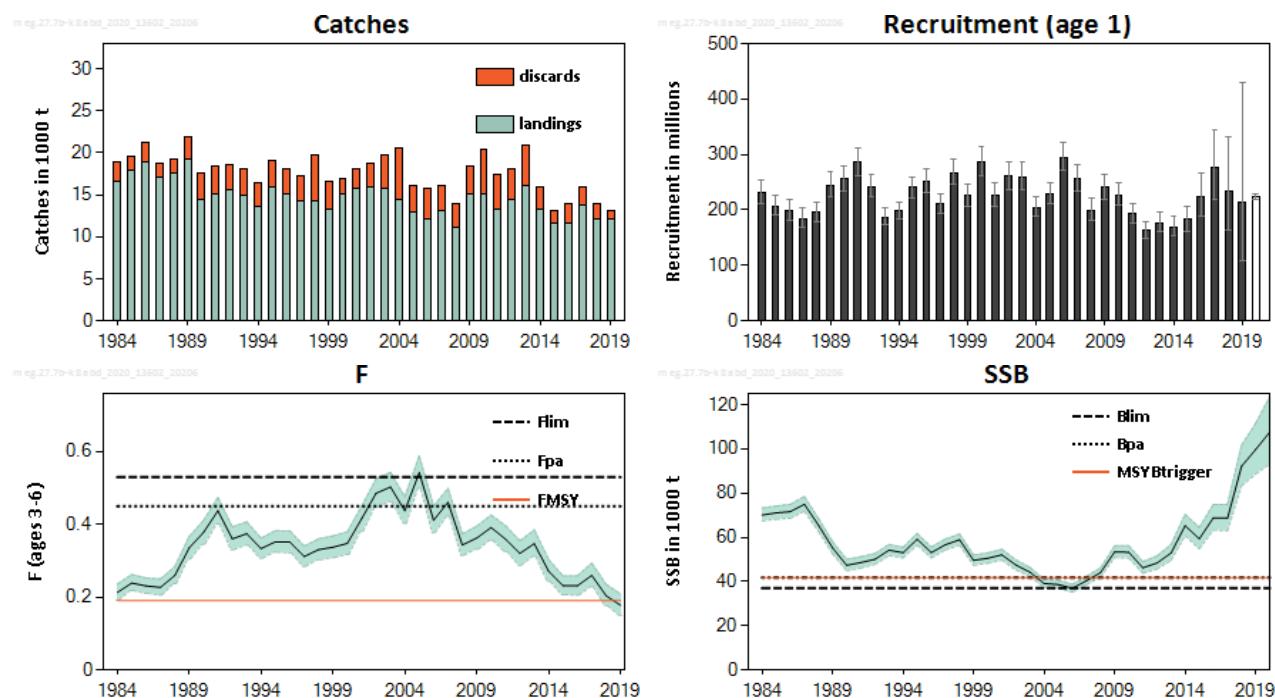

Figure 1 Megrim in divisions 7.b–k, 8.a–b, and 8.d. Summary of the stock assessment. Recruitment (R), fishing mortality (F), and spawning-stock biomass (SSB) are displayed with confidence intervals (95%). Assumed values for recruitment are unshaded.

Stock and exploitation status

Table 1 Megrim in divisions 7.b–k, 8.a–b, and 8.d. State of the stock and the fishery relative to reference points.

	Fishing pressure			Stock size		
	2017	2018	2019	2018	2019	2020
Maximum sustainable yield	F_{MSY}	✗	✗	✓ Below	✓	✓ Above trigger
Precautionary approach	F_{pa}, F_{lim}	✓	✓	✓ Harvested sustainably	✓	✓ Full reproductive capacity
Management plan	F_{MGT}	✓	✓	✓ Within the range	✓	✓ Above

Catch scenarios

Table 2 Megrim in divisions 7.b–k, 8.a–b, and 8.d. Assumptions made for the interim year and in the forecast.

Variable	Value	Notes
F (2020)	0.21	Average F (2017–2019) (not rescaled to 2019, owing to the retrospective pattern).
SSB (2021)	111674	Assessment forecast; tonnes.
R (2020–2021)	223393	Geometric mean of recruitment (1984–2017); thousands.
Catch (2020)	20350	Based on F (2020); tonnes.
Landings (2020)	17201	Average landing rate of 2017–2019; tonnes.
Discards (2020)	3149	Average discard rate of 2017–2019; tonnes.

Table 3 Megrim in divisions 7.b–k, 8.a–b, and 8.d. Annual catch scenarios. All weights are in tonnes. Note: The % change in TAC is not computed because the TAC is for the two species (*Lepidorhombus whiffagonis* and *L. boscii*) combined.

Megrim (*Lepidorhombus whiffiagonis*) in divisions 7.b–k, 8.a–b, and 8.d (west and southwest of Ireland, Bay of Biscay)

ICES advice on fishing opportunities

ICES advises that when the EU multiannual plan (MAP) for Western waters and adjacent waters is applied, catches in 2020 that correspond to the F ranges in the MAP are between 13 218 tonnes and 28 838 tonnes. According to the MAP, catches higher than those corresponding to F_{MSY} (19 982 tonnes) can only be taken under conditions specified in the MAP, while the entire range is considered precautionary when applying the ICES advice rule.

Management of catches of the two megrim species, *L. whiffiagonis* and *L. boscii*, under a combined species TAC prevents effective control of the single-species exploitation rates, and could lead to overexploitation of either species.

Stock development over time

The spawning-stock biomass (SSB) has been above MSY $B_{trigger}$ since 2008 and continues to increase. SSB is now at its highest point in the time series. The fishing mortality (F) has decreased since 2005, and it is below F_{MSY} in 2018. Recruitment (R) has been relatively stable throughout the time series, although the last two years are above the time series average.

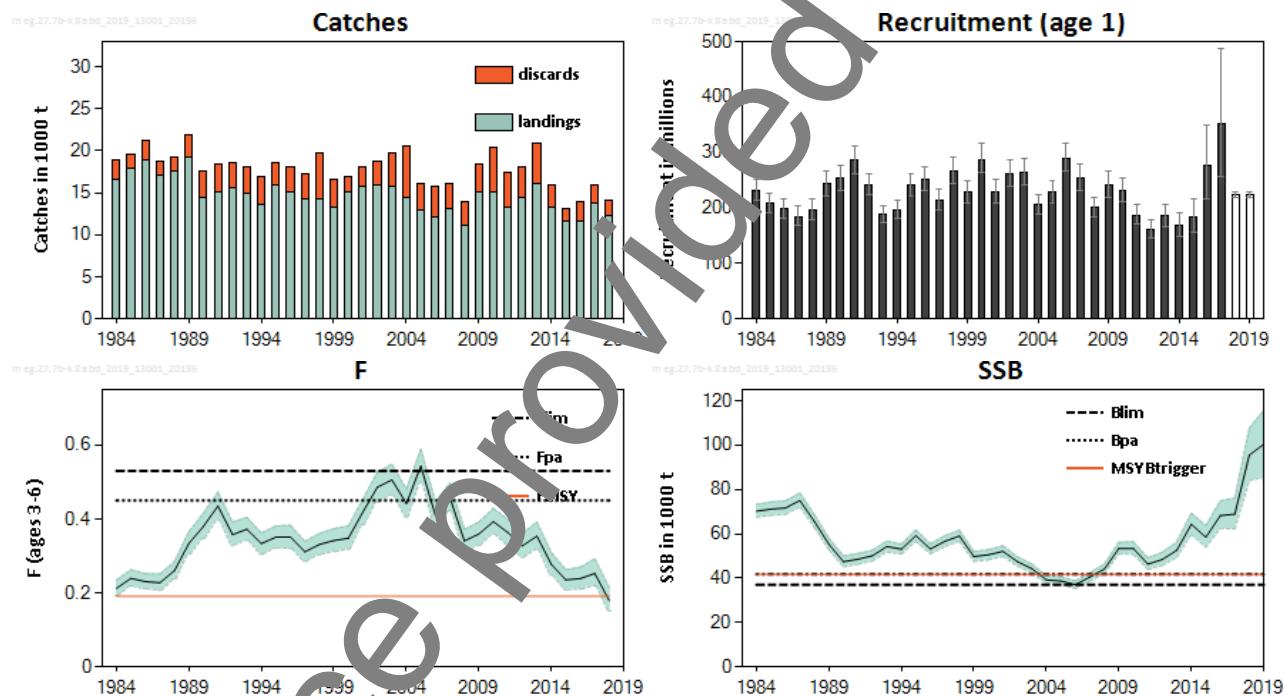

Figure 1 Megrim in divisions 7.b–k, 8.a–b, and 8.d. Summary of the stock assessment. Recruitment, F, and SSB are displayed with confidence intervals (95%). Assumed values of recruitment are unshaded.

Stock and exploitation status

ICES assesses that fishing pressure on the stock is at F_{MSY} ; spawning stock size is above MSY $B_{trigger}$, B_{pa} and B_{lim} .

Table 1 Megrim in divisions 7.b–k, 8.a–b, and 8.d. State of the stock and fishery relative to reference points.

	Fishing pressure			Stock size		
	2016	2017	2018	2017	2018	2019

* SSB 2021 relative to SSB 2020.

** Catch in 2020 relative to the advised catch in 2019 (18976 tonnes).

[^] MAP multiannual plan (EU, 2019).

The decrease of fishing mortality and the above average recruitment in previous years has led to an increase in catch advice.

Basis of the advice

Table 4 Megrim in divisions 7.b–k, 8.a–b, and 8.d. The basis of the advice.

Advice basis	Management plan approach
Management plan	<p>The EU multiannual plan (MAP) for stocks in the Western Waters and adjacent waters applies to this stock. The plan specifies conditions for setting fishing opportunities depending on stock status and making use of the F_{MSY} range for the stock.</p> <p>In accordance with the MAP, catches higher than those corresponding to F_{MSY} can only be taken providing SSB is greater than $MSY_{trigger}$, and one of the following conditions is met:</p> <ul style="list-style-type: none"> a) if it is necessary for the achievement of objectives of mixed fisheries; b) if it is necessary to avoid serious harm to a stock caused by intra- or inter-species stock dynamics; c) in order to limit variations in fishing opportunities between consecutive years to not more than 20%. <p>ICES considers that the F_{MSY} range for this stock used in the MAP is precautionary.</p> <p>Full details of the plan are described in EU (2019).</p>

Quality of the assessment

The 2018 recruitment value has high uncertainty and has been replaced with the geometric mean for the forecast.

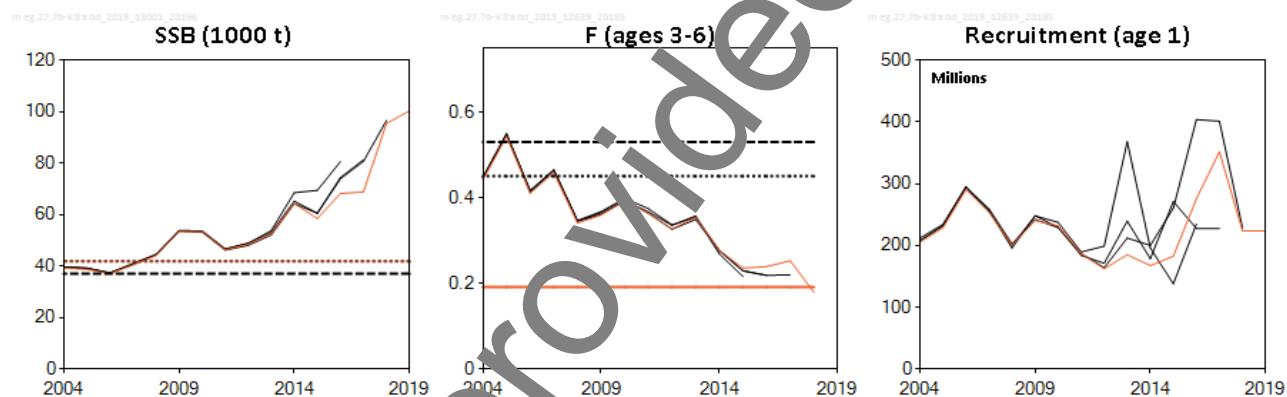

Figure 2 Megrim in divisions 7.b–k, 8.a–b, and 8.d. Historical assessment results (year 2018 and 2019 recruitment estimates included).

Issues relevant for the advice

The two megrim species (*L. whiffingtonis* and *L.boscii*) are not totally separated in the landings. A single TAC covers both species and species-specific landings are estimated by ICES. ICES considers that management of the catches of the two megrim species under a combined TAC prevents effective control of the single-species exploitation rates, and could lead to overexploitation of either species.

Reference points

Table 5 Megrim in divisions 7.b–k, 8.a–b, and 8.d. Reference points, values, and their technical basis. All weights are in tonnes.

Framework	Reference point	Value	Technical basis	Source
MSY approach	MSY $B_{trigger}$	41800	B_{pa}	ICES (2016a)
	F_{MSY}	0.191	Stochastic simulations based on a segmented regression, with the breakpoint fixed at the lowest observed biomass.	ICES (2016a)
Precautionary approach	B_{lim}	37100	B_{loss} , which is the lowest biomass observed, corresponding to year 2016.	ICES (2016a)
	B_{pa}	41800	$B_{lime} e^{1.645 \sigma}; \sigma = 0.07$	ICES (2016a)
	F_{lim}	0.53	The F that gives 50% probability of SSB being above B_{lim} .	ICES (2016a)
	F_{pa}	0.45	$F_{lime} e^{-1.45 \sigma}; \sigma = 0.102$	ICES (2016a)
Management plan	SSB_{mgt}	Not defined		ICES (2016a)
	F_{mgt}	Not defined		ICES (2016a)
	MAP MSY $B_{trigger}$	41800	MSY $B_{trigger}$	ICES (2016b) and EU (2019)
	MAP B_{lim}	37100	B_{lim}	ICES (2016b) and EU (2019)
	MAP F_{MSY}	0.191	F_{MSY}	ICES (2016b) and EU (2019)
	MAP range F_{lower}	0.122	Consistent with ranges provided by ICES (2016b), resulting in no more than 5% reduction in long-term yield compared with MSY.	ICES (2016b) and EU (2019)
	MAP range F_{upper}	0.29	Consistent with ranges provided by ICES (2016b), resulting in no more than 5% reduction in long-term yield compared with MSY.	ICES (2016b) and EU (2019)

Basis of the assessment

Table 6 Megrim in divisions 7.b–k, 8.a–b, and 8.d. Basis of the assessment and advice.

ICES stock data category	1 (ICES, 2018).
Assessment type	Bayesian statistical catch-at-age (ICES, 2019) using catches in the model and forecast.
Input data	Commercial catches (international landings, ages, and length frequencies from catch sampling). Survey indices: FR-EVHOE-W-B1-Q4 and SP-PORC-WIBTS-Q3. Commercial indices: SP-VIGOTR7 (VIGO84, VIGO99), and IRTB. Maturity ogive from Anon. (1998). Natural mortality: a fixed value of 0.2 is used for all age groups and all years.
Discards and bycatch	Discards are included in the assessment.
Indicators	None.
Other information	Last benchmark in 2016 (ICES, 2016a).
Working group	Working Group for the Bay of Biscay and the Iberian Waters Ecoregion (WGBIE)

Information from stakeholders

There is no additional available information.

History of the advice, catch, and management
