

Cod (*Gadus morhua*) in Subdivision 5.b.1 (Faroe Plateau)

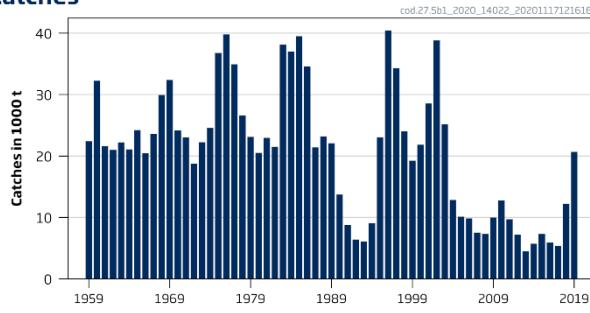

ICES advice on fishing opportunities

ICES advises that when the MSY approach is applied, catches in 2021 should be no more than 6247 tonnes. ICES is not in a position to advise on the corresponding level of fishing effort.

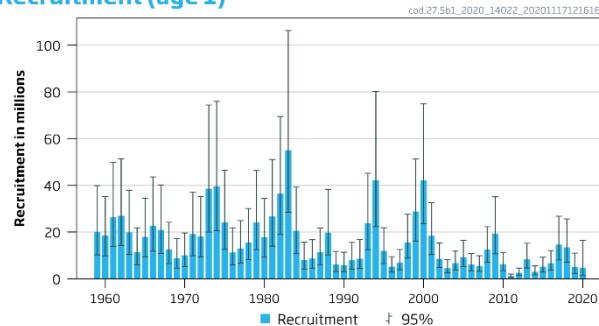

Note: This advice sheet is abbreviated due to the COVID-19 disruption. The previous advice issued for 2020 is attached as Annex 1.

Management plan	F_{MGT}	—	—	—	Not applicable	B_{MGT}

Catch scenarios

Table 2 Cod in Subdivision 5.b.1. Assumptions made for the interim year and in the forecast. All weights are in tonnes.

Variable	Value	Notes
$F_{\text{ages } 3-7}$ (2020)	0.48	Based on catch estimate of 10600 tonnes in 2020.
SSB ₂₀₂₁	33111	Based on $F = 0.48$; in tonnes.
R _{age 1} (2021)	6279	Median of resampled estimates from 2010 to 2019; in thousands.
Landings (2020)	10600	Catch estimate for 2020 based on catch statistics to the end of September adjusted for the entire year; in tonnes.
Discards (2020)	0	Discarding is considered negligible; in tonnes.

Table 3 Cod in Subdivision 5.b.1. Annual catch scenarios. All weights are in tonnes.

Basis	Total catch (2021)	F _{total} (2021)	SSB ₂₀₂₂	% SSB change *	% Advice change **
ICES advice basis					
MSY approach: F_{MSY}	6247	0.23	37415	+13	-47
Other scenarios					
$F = 0$	0	0	49910	+51	-100
$F = F_{2020}$	11366	0.48	31479	-5	-3
$F = F_{\text{pa}}$	15162	0.69	26798	-19	+30
$F = F_{\text{lim}}$	18099	0.90	23354	-29	+55

* SSB₂₀₂₂ relative to SSB₂₀₂₁ (33 111 tonnes).

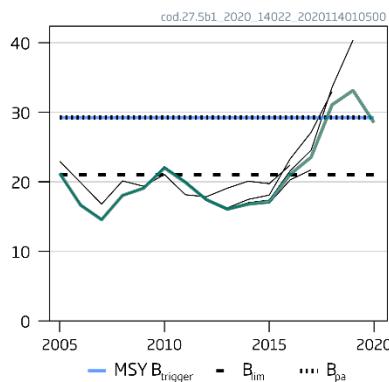

**The advice value for 2021 relative to the advice value for 2020 as issued in 2019 (11 679 tonnes).

The catch advice for 2021 has decreased compared to the advice for 2020; this is due to a substantial downward revision of the spawning-stock biomass (SSB).

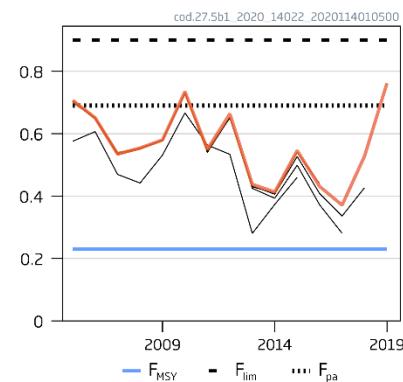

Quality of the assessment

With the addition of the 2020 survey information, the 2018 and 2019 recruitment estimates have been revised downwards contributing to the downward revision of SSB.

SSB (1000 t)

F (ages 3-7)

Annex 1

ICES Advice on fishing opportunities, catch, and effort
Faroes ecoregion
Published 29 November 2019

Cod (*Gadus morhua*) in Subdivision 5.b.1 (Faroe Plateau)

ICES advice on fishing opportunities

ICES advises that when the MSY approach is applied, catches in 2020 should be no more than 11 679 tonnes. ICES is not in a position to advise on the corresponding level of fishing effort.

Stock development over time

The spawning-stock biomass (SSB) was below B_{lim} for several years, but has increased to above MSY $B_{trigger}$ in 2018. Fishing mortality (F) decreased from 2010 but is still above F_{MSY} in 2018. The 2009–2015 year classes are estimated to be below average size. The 2016–2018 year classes are estimated to be average or above average, though there is large uncertainty around these estimates.

Figure 1 Cod in Subdivision 5.b.1. Summary of the stock assessment with 95% confidence intervals.

Stock and exploitation status

ICES assesses that fishing pressure on the stock is above F_{MSY} and below F_{pa} and F_{lim} , while spawning stock size is above MSY $B_{trigger}$, B_{pa} , and B_{lim} .

Table 1 Cod in Subdivision 5.b.1. State of the stock and fishery relative to reference points.

	Fishing pressure			Stock size		
	2016	2017	2018	2017	2018	2019
Maximum sustainable yield	F_{MSY}	✗	✗	✗	Above	
Precationary approach	F_{pa}, F_{lim}	✓	✓	✓	Harvested sustainably	
Management plan	F_{MGT}	—	—	—	Not applicable	
				MSY $B_{trigger}$	✗	✓
				B_{pa}, B_{lim}	○	✓
				B_{MGT}	—	—

Catch scenarios

Table 2 Cod in Subdivision 5.b.1. Assumptions made for the interim year and in the forecast. All weights are in tonnes.

Variable	Value	Notes
$F_{\text{ages } 3-7}$ (2019)	0.43	$F_{2019} = F_{2018}$ as estimated by SAM.
SSB (2020)	69899	Based on $F(2019) = 0.44$.
$R_{\text{age } 1}$ (2020)	7401	In thousands. Median of resampled estimates from 2009 to 2018.
$R_{\text{age } 1}$ (2021)	7401	In thousands. Median of resampled estimates from 2009 to 2018.
Total catch (2019)	13645	Based on $F(2019) = 0.44$.
Landings (2019)	13645	Landings = catches.
Discards (2019)	0	Discarding is considered negligible.

Table 3 Cod in Subdivision 5.b.1. Annual catch scenarios. All weights are in tonnes.

Basis	Total catch (2020)	F_{total} (2020)	SSB (2021)	% SSB change	% Advice change **
ICES advice basis					
MSY approach: F_{MSY}	11679	0.23	110000	57	25
Other scenarios					
$F = 0$	0	0	124069	77	-100
$F = F_{2019}$	20371	0.43	99820	43	118
$F = F_{\text{pa}}$	29509	0.69	88289	26	215
$F = F_{\text{lim}}$	36058	0.90	81116	16	285

* SSB 2021 relative to SSB 2020 (69 899 t).

**Advice value for 2020 relative to the advice value for 2019 as issued in 2018 (9354 t)

The catch advice for 2020 is increased compared to the advice for 2019; this is due to the increase in biomass resulting from the higher recruitment and lower fishing mortality in recent years.

Basis of the advice

Table 4 Cod in Subdivision 5.b.1. The basis of the advice.

Advice basis	MSY approach
Management plan	ICES is not aware of any agreed precautionary management plan for cod in this area.

Quality of the assessment

The stock was benchmarked in 2017, and the assessment model and input data were changed. The historical trajectory of stock development did not change substantially.

The current assessment confirms the large increase of SSB in recent years, consistent with the rapid increase in survey catch rates. The latest assessment shows a large downward revision in the 2018 recruitment estimate.

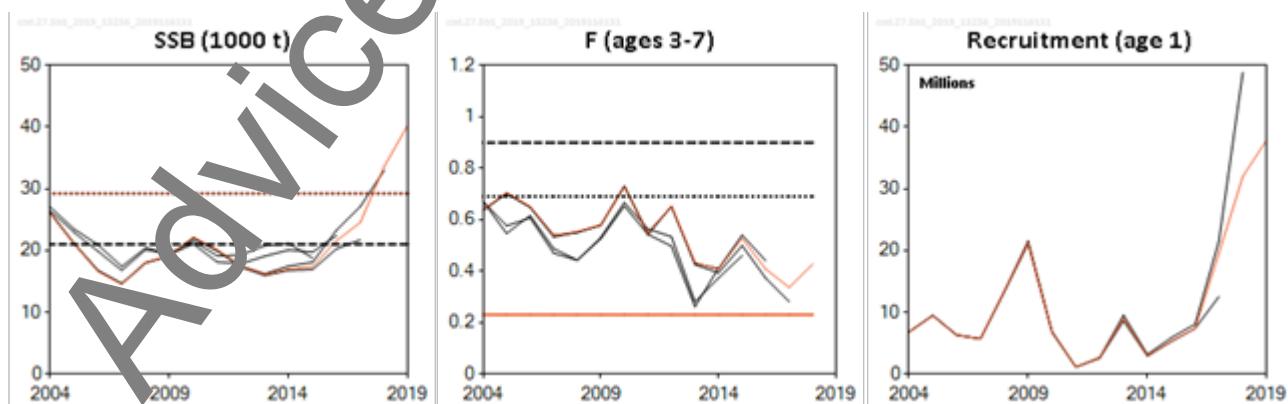

Figure 2 Cod in Subdivision 5.b.1. Historical assessment results. The age of recruitment changed from age 2 to age 1 at the 2017 benchmark; the recruitment plot therefore shows only three lines.

Issues relevant for the advice

An effort management system has been in place since 1996. ICES is currently not in a position to quantify the relationship between effort and F for this stock.

Faroe Plateau cod and Faroe haddock are caught in a mixed fishery.

Reference points

Table 5 Cod in Subdivision 5.b.1. Reference points, values, and their technical basis. All weights are in tonnes.

Framework	Reference point	Value	Technical basis	Source
MSY approach	MSY $B_{trigger}$	29226	$B_{lim} \times \exp(1.645 \times \sigma)$, where $\sigma = 0.20$	ICES (2017)
	F_{MSY}	0.23	Stochastic simulations assuming segmented regression Ricker and Beverton and Holt stock-recruitment relationships	ICES (2017)
Precautionary approach	B_{lim}	21000	B_{loss} in 1992 from the 1998 assessment	ICES (1998, 2017)
	B_{pa}	29226	$B_{lim} \times \exp(1.645 \times \sigma)$, where $\sigma = 0.20$	ICES (2017)
	F_{lim}	0.90	Stochastic simulations (ICES, 2017): the F that gives a 50% probability of SSB > B_{lim}	ICES (2017)
	F_{pa}	0.69	$F_{lim} \times \exp(-1.645 \times \sigma)$, where $\sigma = 0.16$	ICES (2017)
Management plan	SSB _{mgt}	Not applicable		
	F_{mgt}	Not applicable		

Basis of the assessment

Table 6 Cod in Subdivision 5.b.1. Basis of the assessment and advice.

ICES stock data category	1 (ICES, 2018a).
Assessment type	SAM with catch-at-age data and age-disaggregated indices, using catches in the model and in the forecast (ICES, 2019).
Input data	Commercial catches, ages, and length frequencies from catch sampling; survey indices (FO-GFS-Q1 and FO-GFS-Q3); annual mortality data from FO-GFS-Q1; natural mortality set at 0.2.
Discards and bycatch	Discarding is considered ineligible.
Indicators	Co-occurrence of high recruitment of cod with sandeel abundance.
Other information	The stock was benchmarked in 2017 (ICES, 2018b).
Working group	North-Western Working Group (NWWG)

Information from stakeholders

There is no additional available information.

History of the advice, catch, and management

Table 7 Cod in Subdivision 5.b.1. ICES advice and catch. All weights are in tonnes.

Fishing year	ICES advice	Catch corresponding to advice	Agreed TAC***	ICES catch
1987	No increase in F	< 31000		21391
1988	No increase in F (Revised estimate)	< 29000 (23000)		23182
1989	No increase in F	< 19000		22068
1990	No increase in F	< 20000		13692
1991	No fishing	< 16000		8750
1992	No increase in F	< 20000		6396
1993	No fishing	0		6107
1994	No fishing	0	8500/12500*,**	9046
1995	No fishing	0	12500*	23045
1996	F at lowest possible level	-	20000**	40422
1997	80% of F(95)	< 24000		34304

Fishing year	ICES advice	Catch corresponding to advice	Agreed TAC***	ICES catch
1998	30% reduction in effort from 1996/97	-		24005
1999	F less than proposed F_{pa} (0.35)	< 19000		19245
2000	F less than proposed F_{pa} (0.35)	< 20000		21833
2001	F less than proposed F_{pa} (0.35)	< 16000		28577
