

Herring (*Clupea harengus*) in subdivisions 30 and 31 (Gulf of Bothnia)

ICES advice on fishing opportunities

ICES advises that when the EU multiannual plan (MAP) for the Baltic Sea is applied, catches in 2022 that correspond to the F ranges in the plan are between 86 729 tonnes and 111 714 tonnes. According to the MAP, catches higher than those corresponding to F_{MSY} (111 345 tonnes) can only be taken under conditions specified in the plan, whilst the entire range is considered precautionary when applying ICES advice rule.

Stock development over time

Fishing pressure on the stock is below F_{MSY} and spawning-stock size is above MSY $B_{trigger}$, B_{pa} , and B_{lim} .

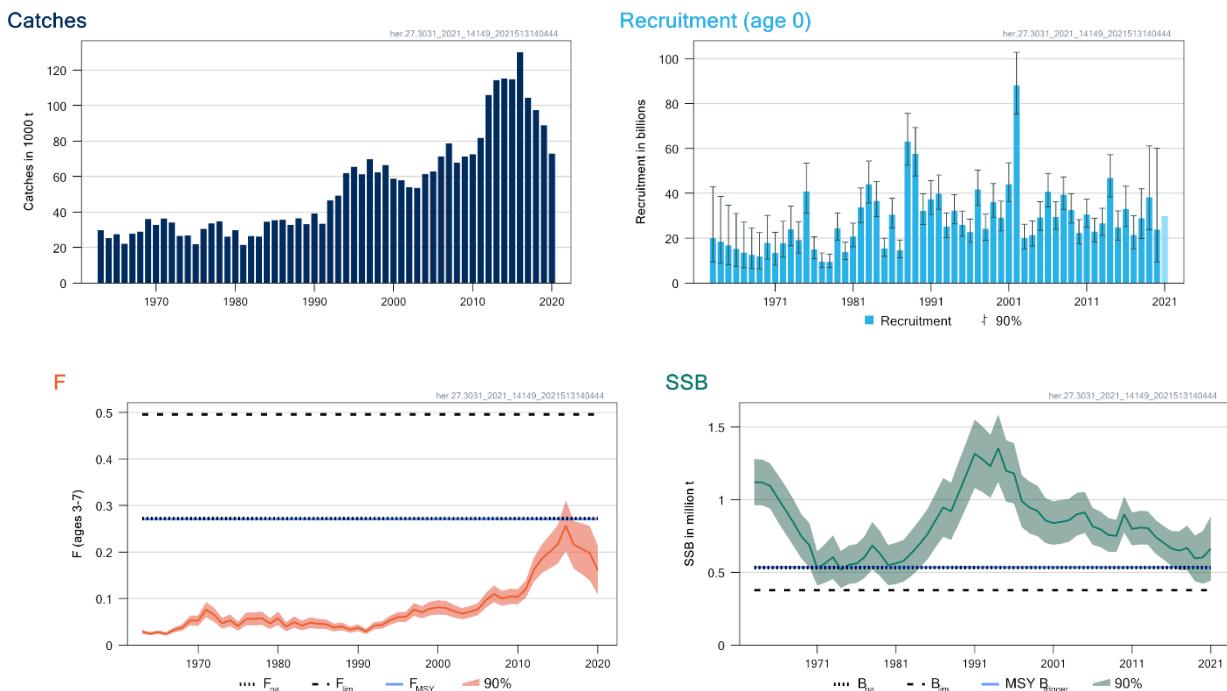

Figure 1 Catches from herring in subdivisions 30 and 31. The assumed recruitment value for 2021 is shaded in a lighter colour.

Catch scenarios

Table 1 Herring in subdivisions 30 and 31. Assumptions made for the interim year and in the forecast.

Variable	Value	Notes
$F_{ages\ 3-7}\ (2021)$	0.271	$F_{2021} = F_{MSY}$
SSB (2021)	663 182	Assessment estimates; tonnes
$R_{age\ 0}\ (2021-2023)$	29 689 960	Average of recruitment (2011–2020); thousands
Total catch (2021)	117 485	Based on updated F_{MSY} advice for 2021; tonnes

^{***} MAP multiannual plan (EU, 2016).

Based on stochastic forecasts, using the F with three decimals getting the closest to the biomass target. SSB (2023) = B_{lim} : -2.2%; SSB (2023) = B_{pa} = MSY $B_{trigger}$: -1.9%; SSB (2023) = SSB (2022): 0.33%.

Basis of the advice

Table 3 Herring in subdivisions 30 and 31. The basis of the advice.

Advice basis	EU Baltic multiannual plan
Management plan	An EU multiannual plan (MAP) in place for stocks in the Baltic Sea includes herring (EU, 2016, 2019). The advice, based on the F_{MSY} ranges used in the management plan, is considered precautionary.

Quality of the assessment

The stock was benchmarked in 2021 (ICES, 2021a), where the stock assessment model and reference points were revised. Revisions were made to input data, including survey information, which was quality assured.

This stock was downgraded from category 1 to category 3 in 2019 and then to category 5 in 2020; historical assessment results are not shown in Figure 2 for these three years.

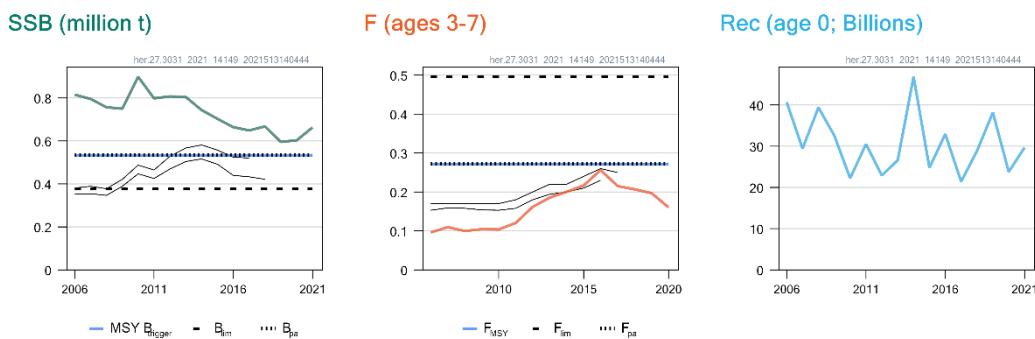

Figure 2 Herring in subdivisions 30 and 31. Historical assessment results (final-year recruitment estimates included). The reference points were revised in 2021 following a benchmark, and only assessment results from the last year should be compared to the reference points indicated.

Issues relevant for the advice

Following the benchmark, the stock status was changed from category 5 to category 1. This has changed the basis for the advice – from that based on scaling recent catches with a precautionary reduction (in 2019) to that based on F_{MSY} from a new assessment which gives a different perspective of the scale of SSB over time.

The advice for 2021 has been updated because of a special request for advice being received after the 2021 benchmark (ICES, 2021a).

The agreed TAC for 2021 at the time of the release of the present advice (65 018 tonnes) is much lower than the updated 2021 catch advice (117 485 tonnes). In the forecast it is assumed that the TAC will be increased in line with the revised advice (117 485 tonnes) and that this level of catch will be taken in 2021. If the realized catches are significantly different from the assumption in the forecast, the catch forecast presented here can be revised.

Reference points

Table 4 Herring in subdivisions 30 and 31. Reference points, values, and their technical basis. Weights are in tonnes.

Framework	Reference point	Value	Technical basis	Source
MSY approach	MSY B_{trigger}	533 515	B_{pa}	ICES (2021b)
	F_{MSY}	0.271	Stochastic simulations (EqSim) with segmented regression fixed at B_{pa}	ICES (2021c)
Precautionary approach	B_{lim}	376 571	$B_{\text{lim}} = B_{\text{pa}}/\exp(1.645 * \sigma)$, $\sigma = 0.212$ (variance in SSB 2020)	ICES (2021b)
	B_{pa}	533 515	$B_{\text{pa}} = B_{\text{loss}}$ (lowest observed SSB during 1980–2019)	ICES (2021b)
	F_{lim}	0.496	The F that on average leads to B_{lim} from EqSim	ICES (2021c)
	F_{pa}	0.272	F_{P05} . The F that leads to $\text{SSB} \geq B_{\text{lim}}$ with 95% probability	ICES (2021c)
Management plan	MAP MSY B_{trigger}	533 515	MSY B_{trigger}	ICES (2021b)
	MAP B_{lim}	376 571	B_{lim}	ICES (2021b)
	MAP F_{MSY}	0.271	F_{MSY}	ICES (2021c)
	MAP target range $F_{\text{lower}}-F_{\text{MSY}}$	0.206–0.271	Consistent with the ranges which result in no more than a 5% reduction in long-term yield compared to F_{MSY}	ICES (2021c)
	MAP target range $F_{\text{MSY}}-F_{\text{upper}}$	0.271–0.272	Consistent with the ranges which result in no more than a 5% reduction in long-term yield compared to F_{MSY}	ICES (2021c)

Basis of the assessment

Table 5 Herring in subdivisions 30 and 31. Basis of the assessment and advice.

ICES stock data category	1 (ICES, 2021d).
Assessment type	Age-based analytical assessment, Stock Synthesis (ICES, 2021c)
Input data	Commercial catches (since 1963); two tuning fleets: one acoustic survey, since 2007 (BIAS, A1588) and one commercial survey, 1990–2006 (trapnet). Annual maturity data from Finnish commercial trawl catches before spawning; age-specific natural mortalities, constant through time.
Discards and bycatch	Not included; discarding and bycatch are considered negligible
Indicators	None
Other information	Last benchmarked in 2021 (ICES, 2021b)
Working group	Baltic Fisheries Assessment Working Group (WGBFAS)
