

Cod (*Gadus morhua*) in NAFO Subarea 1, inshore (West Greenland cod)

ICES advice on fishing opportunities

ICES advises that when the MSY approach is applied, catches in 2022 should be no more than 4780 tonnes.

Stock development over time

ICES assesses that fishing pressure on the stock is above F_{MSY} . The spawning stock size is above MSY $B_{trigger}$, B_{pa} , and B_{lim} .

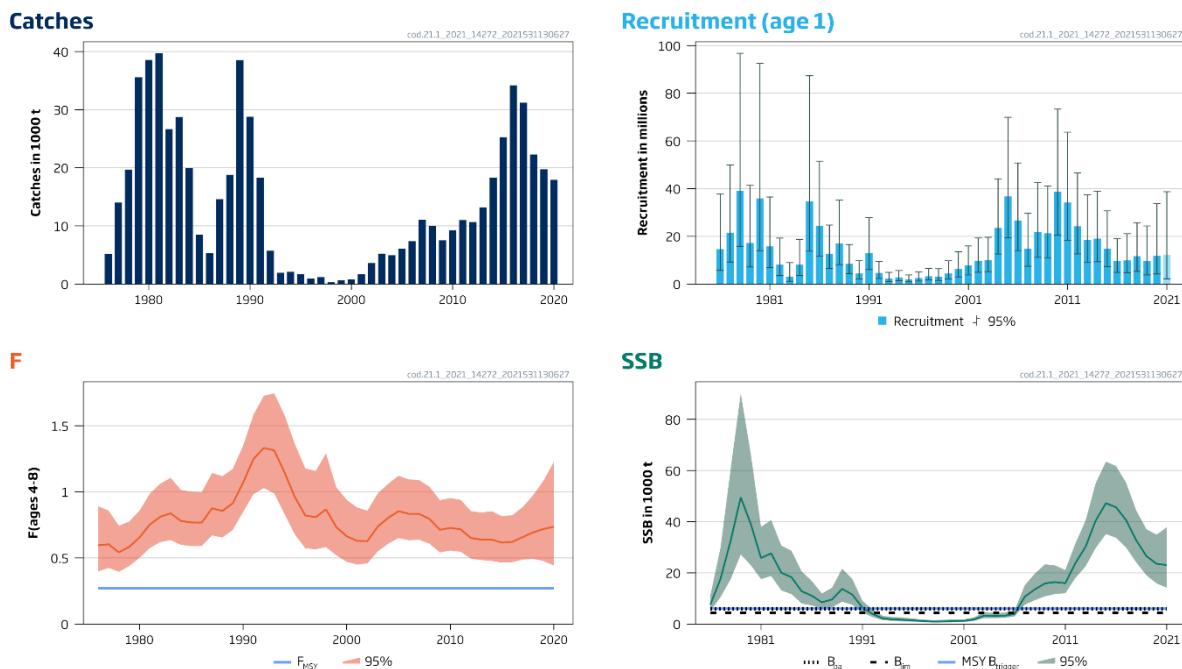

Figure 1 Cod in NAFO Subarea 1, inshore. Summary of the stock assessment. The assumed recruitment value for 2021 is shaded in a lighter colour.

Catch scenarios

Table 1 Cod in NAFO Subarea 1, inshore. Assumptions made for the interim year and in the 2021 forecast.

Variable	Value	Notes
$F_{ages\ 4-8}\ (2021)$	0.74	$F_{sq} = F_{2020}$
SSB (2022)	20199	Fishing at F_{sq} ; tonnes
$R_{age\ 1}\ (2021)$	11666	Median of 1000 randomly drawn N at age 1 from 1973–2020; thousands
Catch (2021)	11793	Based on $F_{ages\ 4-8}\ (2021) = 0.74$; tonnes

Table 2 Cod in NAFO Subarea 1, inshore. Annual catch scenarios. All weights are in tonnes.

Rationale	Catch (2022)	F (2022)	SSB (2023)	% SSB change *	% advice change **
ICES advice basis					
MSY approach: F_{MSY}	4780	0.27	23928	+19%	-10%
Other scenarios					
$F = 0$	0	0	29570	+46%	-100%
$F = F_{2021}$ (<i>status quo</i>)	10141	0.74	17893	-11%	+92%

* SSB₂₀₂₃ relative to SSB₂₀₂₂.

** Advice value for 2022 relative to the advice value for 2021.

Basis of the advice

Table 3 Cod in NAFO Subarea 1, inshore. The basis of the advice.

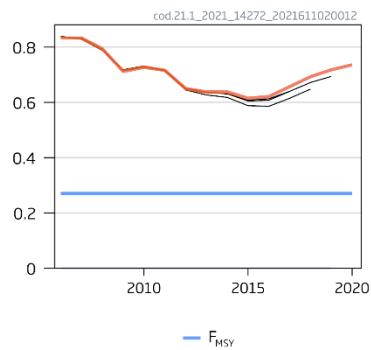

Advice basis	MSY approach.
Management plan	ICES is not aware of any agreed precautionary management plan for cod in this area.

Quality of the assessment

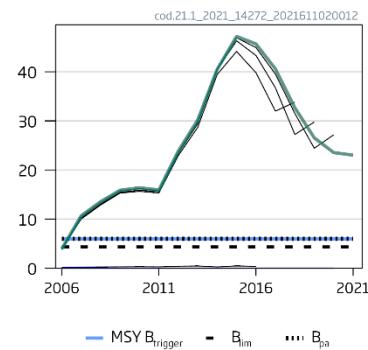

The assessment is considered uncertain because of known stock mixing that affects both surveys and commercial catches.

Genetics have shown that the reported landings include catches of other cod stocks in addition to the West Greenland inshore stock. This may cause a considerable overestimation of stock size of the inshore cod stock.

Issues relevant for the advice

The TAC area covers NAFO Subarea 1 inshore. Several cod stocks mix in this inshore area, including West Greenland inshore and offshore cod, East Greenland cod, and Icelandic cod (Storr-Paulsen *et al.*, 2004). The proportional contribution of each stock is still being investigated, but preliminary results suggest a 50% mix between inshore and other stocks in the catches.

When setting species TAC there is an increased risk of overexploitation of the weakest stock. The West Greenland offshore stock is in a depleted condition and the current ICES advice is zero catch. Bycatch of offshore cod should be kept as low as possible in order to promote rebuilding of the offshore cod stock. This could be achieved by area closures in combination with genetic monitoring.

TACs have not been caught in the last four years, and based on information from the fishing industry it is unlikely that the species TAC of 21 000 tonnes in 2021 will be caught. ICES assumes that fishing continues at current effort levels in 2021, resulting in estimated catches of inshore cod equal to 11 793 tonnes.

Preliminary genetic studies show that there are bycatches of 30–50% of offshore cod in the inshore area. A considerable proportion of these are from the West Greenland offshore stock. This stock is in a depleted condition; the current ICES advice is zero catch, so the bycatch will prolong the stock recovery time.

Reference points

Table 4 Cod in NAFO Subarea 1, inshore. Reference points, values, and their technical basis.

Framework	Reference point	Value	Technical basis	Source
MSY approach	MSY $B_{trigger}$	5983 tonnes	Assumed at B_{pa}	ICES (2018)
	F_{MSY}	0.27	Stochastic simulations with segmented regression and a Beverton–Holt stock-recruitment curve from 1973 to 2017.	ICES (2018)
Precautionary approach	B_{lim}	4346 tonnes	Breakpoint in segmented regression	ICES (2018)
	B_{pa}	5983 tonnes	$B_{lim} \times e^{1.645\sigma}, \sigma = 0.194$	ICES (2018)
	F_{lim}	-	Not defined	
	F_{pa}	-	Not defined	
Management plan	SSB _{mgt}	-	-	
	F_{mgt}	-	-	

Basis of the assessment

Table 5 Cod in NAFO Subarea 1, inshore. Basis of the assessment and advice.

ICES stock data category	1 (ICES, 2021a)
Assessment type	Age-based analytical assessment (SAM; ICES, 2021b) that uses catches in the model and in the forecast.
Input data	Catch-at-age and age-disaggregated survey indices (WGRL-Gill, N6619, since 1987).
Discards and bycatch	Discarding is considered negligible.
Indicators	None.
Other information	Benchmarked in 2018 (ICES, 2018).
Working group	North-Western Working Group (NWWG).

History of the advice, catch, and management
