

5.3.2 Black-bellied anglerfish (*Lophius budegassa*) in Divisions VIIb-k and VIIIa,b,d (West and Southwest of Ireland, Bay of Biscay)

ICES stock advice

ICES advises that when the precautionary approach is applied, landings in 2016 should be no more than 10 757 tonnes. ICES cannot quantify the corresponding total catches.

Management of the two anglerfish species under a combined TAC prevents effective control of the single-species exploitation rates and could lead to overexploitation of either species.

Stock development over time

The biomass has been fluctuating without trend, and the recruitment shows an increasing trend over time.

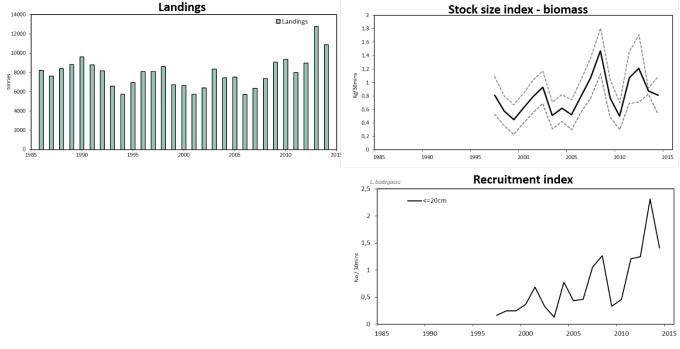

Figure 5.3.2.1 Black-bellied anglerfish in Divisions VIIb–k and VIIIa,b,d. ICES estimated landings (tonnes) and two stock size indices from the EVHOE-WIBTS-Q4 survey indices: biomass (kg [30 min]⁻¹ and recruitment (number [30 min]⁻¹). The recruitment index is defined by fish ≤20 cm. Dashed gray lines indicate ±2 s.d. Discards are thought to occur, but no reliable estimates exist.

Stock and exploitation status

Table 5.3.2.1 Black-bellied anglerfish in Divisions VIIb-k and VIIIa,b,d. State of the stock and fishery, relative to reference points.

	Fishing pressure						Stock size				
		2012	2013		2014	_		2012	2013	2014	
Maximum Sustainable Yield	F _{MSY}	?	?	?	Undefined		MSY B _{trigger}	?	?	Undefined	
Precautionary approach	F _{pa} , F _{lim}	?	?	?	Undefined		B _{pa} , B _{lim}	?	?	Undefined	
Management Plan	F _{MGT}	-	-	-	Not applicable		SSB _{MGT}	-	-	- Not applicable	
Qualitative evaluation	-	?	?	?	Unknown		-			Stable	

Catch options

The ICES framework for category 3 stocks is applied (ICES, 2012a). In the past, the precautionary buffer was not applied due to a steady decrease in fishing effort since the early 1990s and the overall increasing trend in the survey index (ICES, 2013, 2014). The perception of the stock has not changed; therefore, the advice given in the two most recent years is still applicable this year and is described in the table below.

Discarding is known to take place, but ICES cannot quantify the corresponding catch.

 Table 5.3.2.2
 Black-bellied anglerfish in Divisions VIIb-k and VIIIa,b,d. For stocks in ICES data categories 3–6, one catch option is possible

possible.		
Recent advised landings		10 757 tonnes
Discard rate		Unknown, but not negligible
Precautionary buffer	Not applied	-
Landings advice*		10 757 tonnes
*		

* = recent advised landings.

Basis of the advice

Table 5.3.2.3 Black-bellied	Black-bellied anglerfish in Divisions VIIb–k and VIIIa,b,d. The basis of the advice.					
Advice basis	Precautionary approach					
Management plan	There is no management plan for anglerfish (L. budegassa) in this area.					

Quality of the assessment

The EVHOE-WIBTS-Q4 survey mainly covers the shelf area in the Celtic Sea and the Bay of Biscay. Adult anglerfish are known to migrate down the slope as they grow, and this is where the majority of the fishery occurs. The survey is a good index of recruitment for the stock and may not reflect the trends in the adult biomass. Other information, such as commercial lpue and the Spanish Porcupine Groundfish Survey (SPPGFS), support the overall increase in stock biomass since the early 2000s.

Due to uncertain growth parameters and incomplete time-series of reliable discard information, ICES is only able to provide a survey trends-based assessment at this time.

Issues relevant for the advice

ICES is not able to give a catch advice because of uncertain quality of the available discard estimates for some of the main countries participating in the fishery. Available data show that discards are not negligible (>5%).

Reference points

No reference points are defined for this stock.

Basis of the assessment

ICES stock data category	3.2.0 (<u>ICES, 2015a</u>)
Assessment type	Survey trends-based assessment (ICES, 2015b)
Input data	Commercial landings; one survey index (EVHOE-WIBTS-Q4)
Discards and bycatch	Discards are known to take place but cannot be quantified.
Indicators	Effort data for commercial fleets in Divisions VIIb-k and VIIIa,b,d.
Other information	This stock was benchmarked in 2012 (WKFLAT; ICES, 2012b).
Working group report	Working Group for the Bay of Biscay and the Iberian Waters Ecoregion (WGBIE)

Information from stakeholders

There is no available information.

History of advice, catch, and management
