Subject: Data call for the Preliminary catch statistics 2022 for the limited list of species in support of the ICES fisheries advice in 2023

Dear Reader,

Please find enclosed a document describing the rationale, scope and technical details of this Data call 2023 and 3 annexes with additional information.

The data will be used by ICES expert groups contributing to the advisory process, addressing request for advice on fisheries, and fish and shellfish stocks from ICES advice recipients.

For countries that are also EU members, this Data call is under the Council Regulation (EC) No 17/1004 and Council Regulation (EU) No 1380/2013.

Additional data needed to conduct the 2023 assessments of fish stocks will be requested in separate data calls.

In case of questions please contact the ICES Secretariat (data.call@ices.dk) for clarification.

Sincerely,

Lotte Worsøe Clausen

Head of the Advisory Department

CC: Mark Dickey-Collas (ACOM chair); DG-Mare

Data call: Preliminary catch figures 2022 for the limited list of species for ICES fisheries advisory work

Scope of the Data call

This data call requests provisional nominal catches within fishing area 27 from 2022. Catches should be reported only for the species enlisted in **Annex 1**. All countries having national capture data on the requested species should submit their preliminary data by as detailed area level as possible. List of area references can be reviewed in the **Annex 2**.

Rationale

Primary target of this data collection is to provide the latest catch data for fish stock assessments conducted by ICES Expert Groups. ICES is requested to provide fisheries advice regarding stocks in the ICES ecoregions. This advice to fisheries management is developed on the basis of the best available data from national authorities, and the analysis of these data by ICES Expert Groups.

Deadline

ICES requests the data to be delivered by the ~~3rd of February 2023~~ **28th of February 2023** to provide enough time for additional quality assurance prior to data publishing for use by ICES Expert Groups. If a country has difficulties meeting the deadline, respective information should be sent to data.call@ices.dk.

Data to report

The data call aims to collect annual capture figures per country, species, and area. The values to report are **nominal landings (landings on a round, fresh basis = nominal catches in CWP nomenclature) in tonnes live weight**. Submitters are encouraged to use decimals to enhance the reporting precision. Due to the landing obligation by the reformed Common Fisheries Policy, the relevant capture data should be reported by two categories: **AMS (Above Minimum Size)** and **BMS (Below Minimum Size)**. Where the BMS figures are not available, leave the field blank and report nominal landings as AMS only.

Species Latin names should be used in the data submissions. The list of species with valid species names, for which data should be prepared, is given in Annex 1.

Please note that several species have been added to this list following provision of advice needs for the year 2023. This new species are identified in the Annex and in the XML form in the comments section.

Catch-per-species figures should be delivered for each of areas within the Northeast Atlantic, where the national fishing activities took place. Catches within as detailed area unit as possible should be reported. It is important that catches in NEAFC-regulated areas are reported separately from the catches in the non-NEAFC areas by the respective area references. The list of area references with descriptions is given in Annex 2.

Data submission

Data should be compiled into a file with structure as described in the **Annex 3**. Submissions in variety of formats are allowed: Text (csv, txt), Excel (xls, xlsx, xlsm), XML.

ICES Member Countries are requested to submit data to ICES via data.call@ices.dk
If the data submitter did not receive an acknowledgement within 5 workdays after data

submissions, please contact ICES about your submission.
